

DHAIRYA DAVE

Python Backend Developer · APIs & AI Systems

davedhairya21@gmail.com | +91 8200271597 | [LinkedIn](#) | [GitHub](#)

PROFILE

Third-year Computer Science student who builds Python backends: REST APIs with Django, Flask and FastAPI, PostgreSQL, MongoDB and JWT/OAuth 2.0 authentication. Shipped a live fintech platform and an AI forensic tool that ranked 8th of 108 teams in a college hackathon round. Seeking a Python Developer role to contribute to production services.

EDUCATION

L.J. University, Ahmedabad — B.Tech, Computer Science & Engineering

Expected Graduation: 2028 | Semester 5 (current) | Sem 3 SPI: 8.83 | Sem 4 SPI: 8.28

PROJECTS

Setu Workstation | *Django 6, Django Channels, WebSockets, LangGraph, MongoDB, React 19*

- Built a LAN-only AI assistant that carries out voice or text commands on the user's computer (open apps, manage files, run system tasks, browse the web) from a laptop or phone.
- Developed the Django (ASGI) backend with real-time WebSocket streaming, JWT authentication and multi-device sync; application data stored in MongoDB.
- Designed a 3-layer AI model fallback (Gemini → OpenRouter → NVIDIA NIM) with timeouts and response caching, keeping the assistant available if a provider fails and returning repeat queries almost instantly.
- Secured the agent's 13+ tools with a 3-level permission system that blocks destructive shell commands and restricts filesystem access; a rule-based router answers simple requests in under 0.3 s.
- Implemented per-device connection rules: a desktop disconnect cancels in-flight tasks (via threading events) while a mobile disconnect lets them finish; bounded the agent's stored conversation state to 50 checkpoints to prevent unbounded memory growth.

SignalScope | *FastAPI, React, GitHub Actions* — Smart India Hackathon 2026 | [Live](#)

- Built a platform that detects AI-generated images and deepfakes and explains its verdict; ranked 8th of 108 teams (95/100) in the college internal round.
- Developed a FastAPI backend combining two independent detectors (a CLIP vision model and camera-sensor noise analysis) with consensus logic to reduce false positives, returning confidence-graded verdicts and plain-language summaries.
- Set up a GitHub Actions CI pipeline for automated linting; deployed live for evaluation.

FinVest v2 | *Next.js 16, React 19, Flask, Supabase (PostgreSQL), Gemini Vision* | [Live](#) · [Code](#)

- Rebuilt a personal finance platform end to end (Next.js frontend, Flask backend, PostgreSQL on Supabase) with installable PWA support; deployed live on Vercel.
- Implemented secure sign-in with Google OAuth 2.0 and hashed password storage (Werkzeug Security).
- Built an AI receipt splitter (Gemini Vision OCR) that divides expenses, plus live multi-currency rates.

TECHNICAL SKILLS

- Languages & Core:** Python (OOP, data structures), SQL, JavaScript, Java
- Backend & APIs:** Django, Django REST Framework, Flask, FastAPI, REST API design, JWT, OAuth 2.0, WebSockets
- Databases:** PostgreSQL, MySQL, MongoDB, Supabase
- Tools:** Git, GitHub, GitHub Actions, Linux (Ubuntu/WSL2)
- Frontend:** React, Next.js, Three.js
- Machine Learning:** scikit-learn, PyTorch, pandas, NumPy, Matplotlib, Seaborn — models trained from scratch
- Currently Learning:** LangChain, LangGraph

CERTIFICATIONS

- Exploratory Data Analysis for Machine Learning — IBM, Coursera (June 2026)
- Introduction to HTML, CSS, & JavaScript — IBM, Coursera (December 2025)
- Inheritance and Data Structures in Java — University of Pennsylvania, Coursera (July 2025)
- Introduction to Java — LearnQuest, Coursera (January 2025)
